PCB Design Manufacturing Note Template

Labcenter Note: This template is provided as an example. Users should either edit this document as required or create their own corporate template before sending to the board house.

Since the document is largely tables and graphics that are populated from your PCB the size of all the tables and graphics will change according to the project. This means that in most cases the user will have to edit the document to paginate things or resize images !

This document contains information on the construction of the PCB and can be sent to the board manufacturer along with the Gerber files as a reference document.

Board Stackup

PCB Stackup - 10-10-2026 04:34 PM

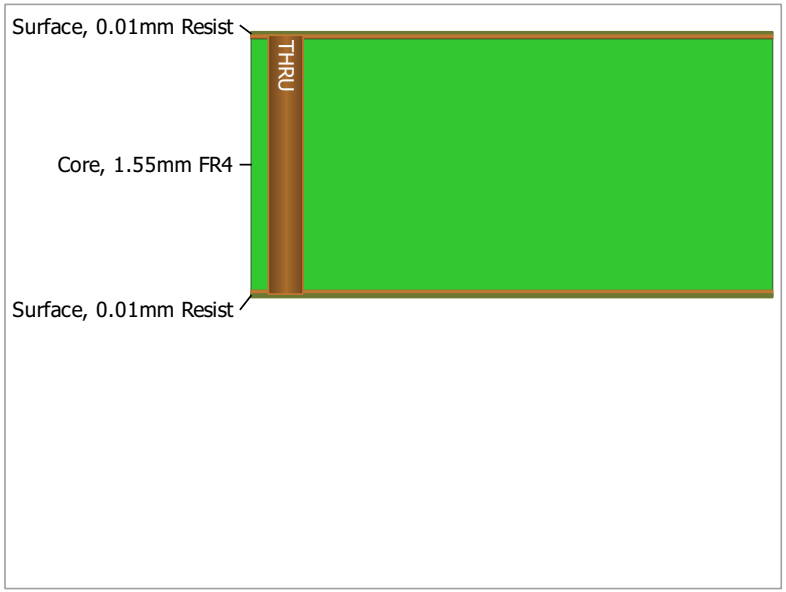

ID	Name	Type	Material	Thickness	Dielectric	Power Plane
TR	Top Resist	Surface	Resist	0.01mm	3.50	
TOP	Top Copper	Signal	Copper	0.018mm		
		Core	FR4	1.55mm	4.80	
BOT	Bottom Copper	Signal	Copper	0.018mm		
BR	Bottom Resist	Surface	Resist	0.01mm	3.50	
	Total			1.606mm		

Notes about board stackup here....

Labcenter Note: Units will be taken from those currently used on the layout. Change to metric / imperial and reload if you want different units. Reload a table by right clicking on the table and selecting 'Reload Project Data' from the resulting context menu.

Labcenter Note: Tables are read only and are not selectable. The easiest way to delete a table is therefore by clicking underneath the table and then hitting backspace to remove

Layer Stackup

PCB Layer Stack Profile *Sat Oct 10 2026*

More information on layer stackup here ....

Drill Table

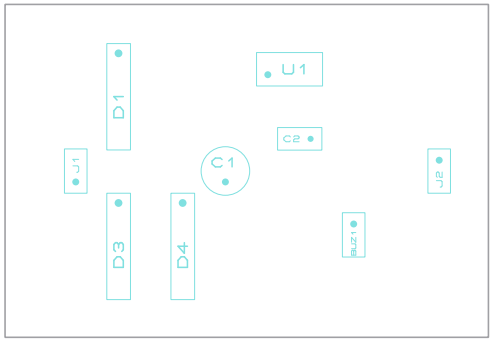

Pad and Via Drill Table - 10-10-2026 04:34 PM

Count	Tool Diameter	Hole Type	Plated	Layer Range	Via/Pad
6	0.762mm	Circular	Plated	Top Copper - Bottom Copper	Pad
17	1.016mm	Circular	Plated	Top Copper - Bottom Copper	Pad
4	3mm	Circular	Plated	Top Copper - Bottom Copper	Pad
27 Total					

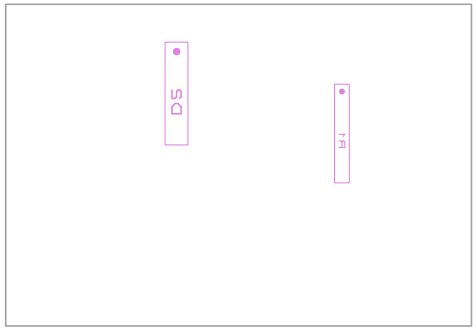

More information about drilling goes here.

Labcenter Note: Slots created as slotted padstacks will correctly be listed in this table. Loose graphics on the designated slotting/routing layer will not be included in this table and the board edge / cutouts are similarly not included in this table.

Assembly Drawings

Top Assembly *Sat Oct 10 2026*

Bottom Assembly *Sat Oct 10 2026*

Notes here...

Labcenter Note: The Assembly drawings (top and bottom) have been sized according to a double eurocard board as an example. When working with your own projects you will most likely want to resize or restore aspect ratio. You can do this via the right click context menu - the customize appearance option on the context menu will also let you add/remove layers and change colours.

Fiducial Positions

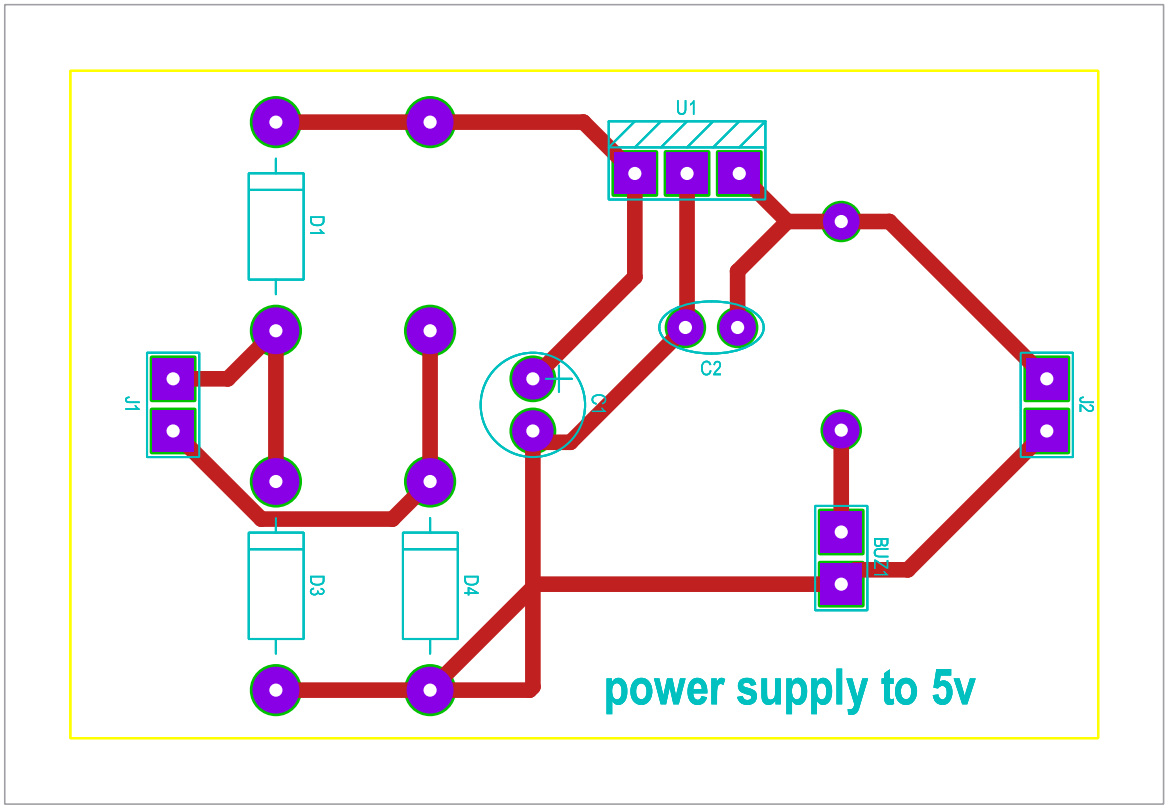

Fiducial Pads - 10-10-2026 04:34 PM

Style	Position	Diameter	Layer

Notes here....

Labcenter Note: Proteus identifies a fiducial as a pad style beginning with the word FIDUCIAL. Users can have as many styles as needed (e.g. FIDUCIALBOARD, FIDUCIAL20) and this table will list their positions here. Please note that Pads of other styles used as fiducials will not be listed in this table !

PCB Artwork

PCB Artwork *Sat Oct 10 2026*

Notes here....

Labcenter Note: The full print set is available to users here via right click -> Reconfigure Project Data so you can deselect layers and/or change colours. You can add more PCB images (E.g. drill plot) from the Project Data icon at the top or by right clicking in empty space and selecting Insert -> Project Data -> PCB Image Output
